

Schedule-family lifespans within 5-hr budget. Bars span first→last attempt in family per agent.

Schedule family (axis) — Claude=top row, Gemini=bottom row of each pair

◆ First attempt in family ✕ Last in-budget attempt Claude (top half of row) Gemini (bottom half of row)

A family can REOPEN within the budget; the x marks the LAST in-budget attempt, not an explicit LESSON closure (agents did not emit AXIS/LESSON tags).
AXIS classification is heuristic (regex over docstring + code).
